DNA Intensive Repair Creme

This highly advanced formula corrects all signs of skin aging by promoting the skin's natural protection and repair factors involved in detoxification, anti-stress, telomere maintenance and DNA repair. To protect the DNA of skin cells, Bellanina DNA Repair Crème helps prevent the senescence of cells, enhances cell function, improves the quality of the tissue, and extends the youth span of the skin to reduce all visible signs of aging – not just wrinkles. Problem The aging process begins at the cellular level within the DNA. Telomeres, part of the DNA structure, grow shorter as cells replicate; and as they shorten, cells begin to enter senescence or an aging state, which produces wrinkles. In addition, factors such as free radicals, lack of moisture, stress and toxins damage the DNA of skin cells, which also contribute to the genesis of wrinkles.
